Here are the online instructions on how to setup Reprise license server that comes with AFGROW.
http://www.reprisesoftware.com/RLM_Enduser.html

Here is the link to download the license server files:

http://www.afgrow.net/downloads/applications/rlm_license_server-12.zip

The basic steps that you need to follow to setup the license server

1. Copy the content of the zip file on the server
2. Use reprise software to generate the server host id: you will need to run a command: "rlmhostid" using windows command prompt in the license server home directory

3. Send the server name and the host id to al@lextechcentral.com, and I will send you the license file.

4. Once you receive the license file, copy it to the same directory that you put the license server files and install the license server as a window service. You can find the instructions right here: http://www.reprisesoftware.com/RLM_Enduser.html
